Please find below and/or attached an Office communication concerning this application or proceeding.

## Office Action Summary

Application No.

10/666,252

Applicant(s)

HIRAHARA ET AL.

Examiner

Paul S. Hyun

Art Unit

1743

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 24 April 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1 and 2 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1 and 2 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- |  |   |
|--|---|
| 1) <input checked="" type="checkbox"/> Notice of References Cited (PTO-892)                        | 4) <input type="checkbox"/> Interview Summary (PTO-413)                     |
| 2) <input type="checkbox"/> Notice of Draftsperson's Patent Drawing Review (PTO-948)               | Paper No(s)/Mail Date. _____  |
| 3) <input checked="" type="checkbox"/> Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08) | 5) <input type="checkbox"/> Notice of Informal Patent Application (PTO-152) |
| Paper No(s)/Mail Date <u>4/25/06</u>   | 6) <input type="checkbox"/> Other: _____                                    |

## DETAILED ACTION

### Remarks

The Terminal Disclaimer filed by Applicants has been acknowledged. Consequently, the obviousness-type double patenting rejection cited in the First Office action is withdrawn.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Vestal (US 4,958,529) in view of Huber (US 4,989,976), Barnes et al. (US 4,688,935) and Carnahan (US 5,723,861).

Vestal discloses an analytical apparatus for analyzing liquid samples (see Fig. 3). The apparatus comprises a liquid chromatographic device connected to a nebulizer 16 via a channel. The apparatus further comprises a carrier gas source in fluid communication with the nebulizer via a conduit 33 having a flow meter 40 is disposed therein for controlling the flow rate of the carrier gas. Lastly, the apparatus comprises a sample gas passageway having one end connected to the outlet of the vaporizer and the other end connected to the inlet of an ICP emission spectrometer 14, wherein a momentum separator 15 is disposed in the sample gas passageway.

The apparatus disclosed by Vestal differs from the claimed invention in that the reference does not disclose a liquid mass flow controller or gas cylinders filled with standard gas for calibration. The reference also does not disclose that the apparatus can be used to analyze organometallic compounds.

In regards to the liquid mass flow controller, Huber discloses a device for controllably supplying a sample liquid to a nebulizer. The device comprises a control device 46 that controls the speed of a peristaltic pump 48 that feeds the sample liquid to the nebulizer (see lines 50-54, col. 5).

In regards to the plurality of gas cylinders filled with standard gas, Carnahan discloses an analyzer comprising a calibration device 20 situated downstream of the sample flow for calibrating a spectrometer. The calibration device comprises cylinders filled with standard gas and a flow sensor for controlling the flow of the standard gas fed into the spectrometer (see Fig. 2).

In regards to the analysis of an organometallic compound, Barnes et al. disclose an analyzer adapted to analyze organometallic compounds. The analyzer comprises a vaporizer that vaporizes a organometallic liquid sample and feeds the vaporized sample to an ICP emission spectrometer.

In light of the teachings of Huber, it would have been obvious to one of ordinary skill in the art to provide the apparatus disclosed by Vestal with a liquid flow controller in order to provide a means to control the rate of sample fed into the nebulizer. In light of the teachings of Carnahan, it would have been obvious to one of ordinary skill in the art to provide the apparatus disclosed by Vestal with a calibration device comprising gas

Art Unit: 1743

cylinders filled with standard gas and a flow sensor downstream of the momentum separator in order to provide a means for calibrating the ICP emission spectrometer. In light of the teachings of Barnes et al. it would have been obvious to one of ordinary skill in the art to analyze the amount of impurities in an organometallic sample using the apparatus disclosed by Vestal.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Vestal in view of Huber, Barnes et al. and Carnahan as applied to claim 1, and further in view of Mitsumaki et al. (US 4,696,183).

Vestal in view of Huber, Barnes et al. and Carnahan disclose the apparatus of claim 1, but the references do not disclose that each individual gas cylinder comprises a separate passageway, each passageway comprising a flow controller.

Mitsumaki et al. disclose an analysis system comprising a plurality of chambers 67 and 68, each chamber having standard gas therein for calibrating a detector. Each chamber is connected to the detector via an individual conduit (see Fig. 1). It would have been obvious to one of ordinary skill in the art to provide an individual passageway for each of the gas cylinder of the modified Vestal apparatus so that the same passageway is not used for the transport of different calibration gases.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Paul S. Hyun whose telephone number is (571)-272-8559. The examiner can normally be reached on Monday-Friday 8AM-4:30PM.

Art Unit: 1743

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill Warden can be reached on (571)-272-1267. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
